

Gornje Podunavlje

The Central
Danube Floodplains

Integrating Local Communities and Nature Protection

One of the few intact transboundary floodplains on the European Green Belt route – comprised of adjacent protected areas along the Danube in Croatia, Hungary and Serbia – faces threats like many other European floodplains. Therefore it is essential to find the key solutions for a sustainable future of this area. Closely cooperating with local communities, IUCN supports improved transboundary cooperation and capacity building among the protected area authorities and local stakeholders
